

Aqua Improvements

- Installed a new 12-inch water main to serve the Fresh Mark food production facility when the 60-year-old 10-inch main was nearing the end of its useful life.
- Replaced the 1,900 linear feet of main serving the business as part of a \$4.4 million dollar 2017 infrastructure investment plan.
- Replaced more than 22,000 linear feet of main in the Stark County system serving 36,000 customers over the 2017 construction.
- Invested more than \$11.7 million in the Stark County system between 2015 and 2017 alone.

The Impact

“Continual replacement of aging infrastructure is key to delivering safe, reliable water to families and businesses in our communities. Reliability keeps residents happy and businesses growing. I appreciate all of Aqua’s investments in the community but especially the recent water main replacement that serves our facility. A water main break last winter shut down our production line and left 600 employees idle until it was fixed. This new main will help assure we have the flow we need to keep staff busy and production running strong for many years.”

Dan Cornelius, Maintenance Manager, Fresh Mark Massillon
